K9 HeavyDuty™ 30mm Antibacterial Grass

K9 HeavyDuty™ 30mm grass is designed and constructed for heavily used dog areas. This product is ideal for dog kennels, pet hotels and most commercial dog areas. The triple layer backing plus the exclusive ERET glue system helps to reduce any damage that can cause by a digging dog. The revolutionary ERET glue will also provide an extra protection to the exposed stitches that will rub and could damage against rough surfaces. This product consists of antibacterial and the K9 HeatBlock® technologies to control the spread of bacteria and also reduce the heat generated from synthetic grass. The “Y” shape yarn design assists the grass to spring back to its original position compared to ordinary flat shape yarns.

Key Benefits

Antibacterial Technology

Natural Look with curly brownish yarns

“Y” shape yarn assists the grass to stand up + natural look

K9 HeatBlock® + ZeoFill® cools the grass up to 30%

100% Recyclable

Three layer + ERET glue provides extra strength & durability

K9 HeatBlock®

K9 DrainPro™ 40mm Antibacterial Grass

The K9 DrainPro™ 40mm uses a revolutionary backing to increase the water permeability. This K9 DrainPro™ made with net backing technology with a special glue allows the dog urine to pass through the grass into the subbase up to three times faster than any ordinary pet friendly artificial grass on the market. Ideally used for residential backyards with dog breeds that are not super active. This product consists of antibacterial, K9 HeatBlock® and the K9 DrainPro™ technologies to control the spread of bacteria and also reduce the heat generated from synthetic grass. The “W” shape yarn design assists the grass to spring back to its original position while maintaining the realistic appearance. The 40mm yarn height provides comfort under your dog's feet and also makes the grass ideal for kids to play on.

Odour Control Crystals

Organic and Safe for Pets

ZeoFill® is a 100% organic product certified by the Australian Certified Organic (ACO Certification Ltd) registered as a farm input (allowed input 10914AI). Unlike ordinary infills for synthetic grass ZeoFill® does not contain any harmful chemicals, which means you don't have to worry even if your pet consumes it. Our ZeoFill® is 100% Australian sourced and packaged.

Helps to Cool the Yarn

ZeoFill® has a unique ability to contain water up to a certain degree of its total mass. This helps to reduce the heat that generates from Synthetic Grass in hot weather conditions.

Reduce Bad Odours and Maximise Drainage

Due to the negative charged particles, ZeoFill® will absorb the ammonia off the pets urine prior to getting absorbed into the backing of the synthetic grass or the subbase. This will help reduce bad odours that generate from pet urine on synthetic grass. ZeoFill® will reduce the risk of blocking the drainage holes on your synthetic lawn due to the size of the particles. Normal sand can clog the drain holes on synthetic grass which will reduce the permeability of it overtime.

Combine ZeoFill® with our K9Grass™ range to achieve the best results
